### How an Epidemic of Measles Got Its Start.

The following account of a severe epidemic of measles and how it started is given in Farm and Fireside, the national farm paper published in Springfield, O.:

"A mother and child were waiting for a train in the Union station at Kansas City—destination Manhattan, Kan. A little girl in the next seat was broken out with measles; had a high fever and a bad cough.

"Two weeks later the exposed child was taken sick with measles. Four college students were rooming with the people whom this mother and child were visiting. Ten days later two of these students were telling what a severe cold they had, and how they felt, but they went on to school until quarantined for measles. The exposure had been completed. Others came down.

"Reports began to come to this department until we recorded 540 cases of measles within the boundaries of Riley county; also the deaths of four babies,

to whom this disease is very fatal. Many other persons will go through life with some defect due to this disease."

### Best Way to Kill Flies.

The May Woman's Home Companion gives a way to kill flies that beats swatting 'em all hollow. Here it is:

"Take a piece of seven-eighths-inch soft wood three inches square, into which you have driven, near the corners at a slight angle, four eight-penny finish nails. Saw off the handle of an old broom and nail this block of wood to one end of it. Half fill a tumbler with cold water and put in it a tablespoonful of kerosene oil (soapsuds also may be used). Place the tumbler on the piece of wood between the nails and raise it to the ceiling, covering the fly. The fumes of the kerosene oil cause the flies to drop into the glass. The best time to do this is in the evening, at dusk, or early in the morning while the flies are settled on the ceiling."
